

DSA Trees - Company Organization Example

Problem Statement

Represent a company's hierarchy using a Binary Tree. The CEO is the root, two managers report to the CEO, and each manager has two team members.

Diagram

Java Program

```
class Node {  
    String name;  
    Node left, right;  
  
    Node(String name) {  
        this.name = name;  
    }  
}  
  
public class CompanyTree {  
    public static void main(String[] args) {  
        Node root = new Node("CEO");  
  
        root.left = new Node("Manager A");  
        root.right = new Node("Manager B");  
  
        root.left.left = new Node("Developer 1");  
        root.left.right = new Node("Developer 2");  
  
        root.right.left = new Node("Tester 1");  
        root.right.right = new Node("Tester 2");  
  
        System.out.println("CEO : " + root.name);  
        System.out.println("Left Manager : " + root.left.name);  
        System.out.println("Right Manager : " + root.right.name);  
        System.out.println("Employee : " + root.left.left.name);  
        System.out.println("Employee : " + root.right.left.name);  
    }  
}
```

Sample Output

```
CEO : CEO  
Left Manager : Manager A  
Right Manager : Manager B  
Employee : Developer 1  
Employee : Tester 1
```

Tree Concepts

Root: CEO

Parent Nodes: Manager A, Manager B

Leaf Nodes: Developer 1, Developer 2, Tester 1, Tester 2

Tree Type: Binary Tree
