

Core Java Placement Handbook - Part 2

Q26. Which access modifier makes a member accessible only within the same class?

- A. public
- B. protected
- C. private
- D. default

Answer: C

Explanation: private restricts access to the same class.

Q27. Which access modifier makes a member accessible from anywhere?

- A. private
- B. protected
- C. default
- D. public

Answer: D

Explanation: public provides global access.

Q28. Which keyword is used to define a constant variable?

- A. static
- B. final
- C. const
- D. fixed

Answer: B

Explanation: final variables cannot be reassigned.

Q29. Which constructor has no parameters?

- A. Parameterized
- B. Default
- C. Copy
- D. Static

Answer: B

Explanation: A default constructor has no parameters.

Q30. Which constructor accepts arguments?

- A. Default
- B. Empty
- C. Parameterized
- D. Static

Answer: C

Explanation: Parameterized constructors initialize values.

Q31. Which method can have same name with different parameters?

- A. Overriding
- B. Overloading
- C. Inheritance
- D. Encapsulation

Answer: B

Explanation: Method overloading is compile-time polymorphism.

Q32. Which feature hides implementation details?

- A. Polymorphism
- B. Inheritance
- C. Abstraction
- D. Constructor

Answer: C

Explanation: Abstraction hides complexity.

Q33. Which OOP concept binds data and methods?

- A. Abstraction
- B. Encapsulation
- C. Inheritance
- D. Polymorphism

Answer: B

Explanation: Encapsulation wraps data and methods.

Q34. Which keyword creates an interface?

- A. class
- B. abstract
- C. interface
- D. implements

Answer: C

Explanation: Interfaces are declared using interface.

Q35. Which keyword implements an interface?

- A. extends
- B. interface
- C. implements
- D. inherit

Answer: C

Explanation: Classes implement interfaces.

Q36. Which class is parent of all Java classes?

- A. Main
- B. Object
- C. Class

D. System

Answer: B

Explanation: Every class extends Object.

Q37. Which method compares string contents?

A. ==

B. equals()

C. compare()

D. compareTo()

Answer: B

Explanation: equals() compares content.

Q38. Which operator compares object references?

A. equals()

B. ==

C. compareTo()

D. instanceof

Answer: B

Explanation: == compares references.

Q39. Which class creates mutable strings?

A. String

B. Character

C. StringBuffer

D. Integer

Answer: C

Explanation: StringBuffer is mutable.

Q40. Which class also creates mutable strings?

A. StringBuilder

B. String

C. Character

D. Float

Answer: A

Explanation: StringBuilder is mutable and faster.

Q41. Which keyword throws an exception explicitly?

A. throws

B. throw

C. catch

D. finally

Answer: B

Explanation: throw raises an exception.

Q42. Which keyword declares a method may throw an exception?

- A. throw
- B. throws
- C. try
- D. catch

Answer: B

Explanation: throws declares exceptions.

Q43. Which block handles an exception?

- A. try
- B. throw
- C. catch
- D. finally

Answer: C

Explanation: catch handles exceptions.

Q44. Which exception occurs when dividing by zero?

- A. IOException
- B. ArithmeticException
- C. NullPointerException
- D. NumberFormatException

Answer: B

Explanation: Division by zero triggers ArithmeticException.

Q45. Which exception occurs when accessing a null object?

- A. ArithmeticException
- B. IOException
- C. NullPointerException
- D. ClassCastException

Answer: C

Explanation: Null reference access causes NPE.

Q46. Which collection maintains insertion order and allows duplicates?

- A. HashSet
- B. ArrayList
- C. TreeSet
- D. HashMap

Answer: B

Explanation: ArrayList allows duplicates.

Q47. Which collection does not allow duplicates?

- A. ArrayList
- B. LinkedList

- C. HashSet
- D. Vector

Answer: C

Explanation: HashSet stores unique values.

Q48. Which collection stores key-value pairs?

- A. ArrayList
- B. HashMap
- C. HashSet
- D. Stack

Answer: B

Explanation: HashMap stores key-value pairs.

Q49. Which method adds an element to ArrayList?

- A. insert()
- B. add()
- C. push()
- D. put()

Answer: B

Explanation: add() appends elements.

Q50. Which method removes an element from ArrayList?

- A. delete()
- B. remove()
- C. erase()
- D. clearItem()

Answer: B

Explanation: remove() deletes an element.
