

Dinner Menu Binary Tree - Simple Java Example

Tree Diagram

Java Program

```
class Node {
    String data;
    Node left, right;

    Node(String data) {
        this.data = data;
    }
}

public class DinnerMenuTree {

    public static void main(String[] args) {

        Node root = new Node("Dinner");

        root.left = new Node("Vegetarian");
        root.right = new Node("Non-Vegetarian");

        root.left.left = new Node("Paneer");
        root.left.right = new Node("Dosa");

        root.right.left = new Node("Chicken");
        root.right.right = new Node("Fish");

        System.out.println("Root : " + root.data);
        System.out.println("Left Child : " + root.left.data);
        System.out.println("Right Child : " + root.right.data);
        System.out.println("Veg Dish : " + root.left.left.data);
        System.out.println("Non-Veg Dish : " + root.right.left.data);
    }
}
```

Output

```
Root : Dinner
Left Child : Vegetarian
Right Child : Non-Vegetarian
Veg Dish : Paneer
Non-Veg Dish : Chicken
```

Concepts Covered

- Root Node: Dinner
- Parent Nodes: Vegetarian, Non-Vegetarian
- Leaf Nodes: Paneer, Dosa, Chicken, Fish
- Tree Type: Binary Tree
